

ENGINE+ UPGRADE
XP140 FOR CESSNA CARAVAN

5 MONEY SAVING ADVANTAGES

The Blackhawk XP140 Engine+ Upgrade for your Caravan and Grand Caravan gives you a factory-new, more efficient engine. It delivers the highest performance levels available, saving you both time and money while providing a significant return on investment over the stock engine.

1 SAVE AN AVERAGE OF \$360,000

Save 45 Cents Per Nautical Mile Flown

That's the operating cost savings compared to the stock Caravan engine, adding up to an annual \$36,000 savings when flying an average of 60,000 NM per year (an average of \$360,000 saved before overhaul based on 4,000 hr TBO).

2 COVERAGE THROUGH THE 4,000TH HR

Lower Maintenance Costs & Increased Reliability

Pratt & Whitney Canada New Engine Enhanced Warranty 1,000 Hours, No Calendar Limit with Limited Coverage on Primary Parts through the 4,000 Hour TBO.

3 REDUCE MAINTENANCE EXPENSES

Reduced Hot Section Inspection & Overhaul Budget

Aircraft and fleets opting for the XP140 upgrade can expect reduced overhaul budgets, as the base TBO (Time Between Overhauls) is extended by an impressive 400 hours (about a year).

4 STRONGEST RESALE VALUE

The Strongest of Any Engine Upgrade on the Market, Including Overhaul

Engines are an aircraft's primary value center. Engine upgrade investments result in faster sales and superior resale value compared to overhauled engines. Plus, customizing your existing aircraft brings more value than buying new.

5 SAVE TIME WITH ACCESS TO MORE DESTINATIONS

More Options with Shorter Takeoffs and an Increased Rate of Climb

Save time and reach more destinations by effortlessly accessing airports with shorter runways, even on hot days and in high-density altitude conditions - bringing you closer to your destination, faster.
